

BIAI

**Classification of furry animals**

# Analysis of the task

# Dataset

## **Training set:**

- Cat: 1845
- Dog: 1655
- Rabbit: 967
- Sheep: 1740
- Squirrel: 1782

7989 images

## **Testing set:**

- Cat: 100
- Dog: 100
- Rabbit: 40
- Sheep: 80
- Squirrel: 80

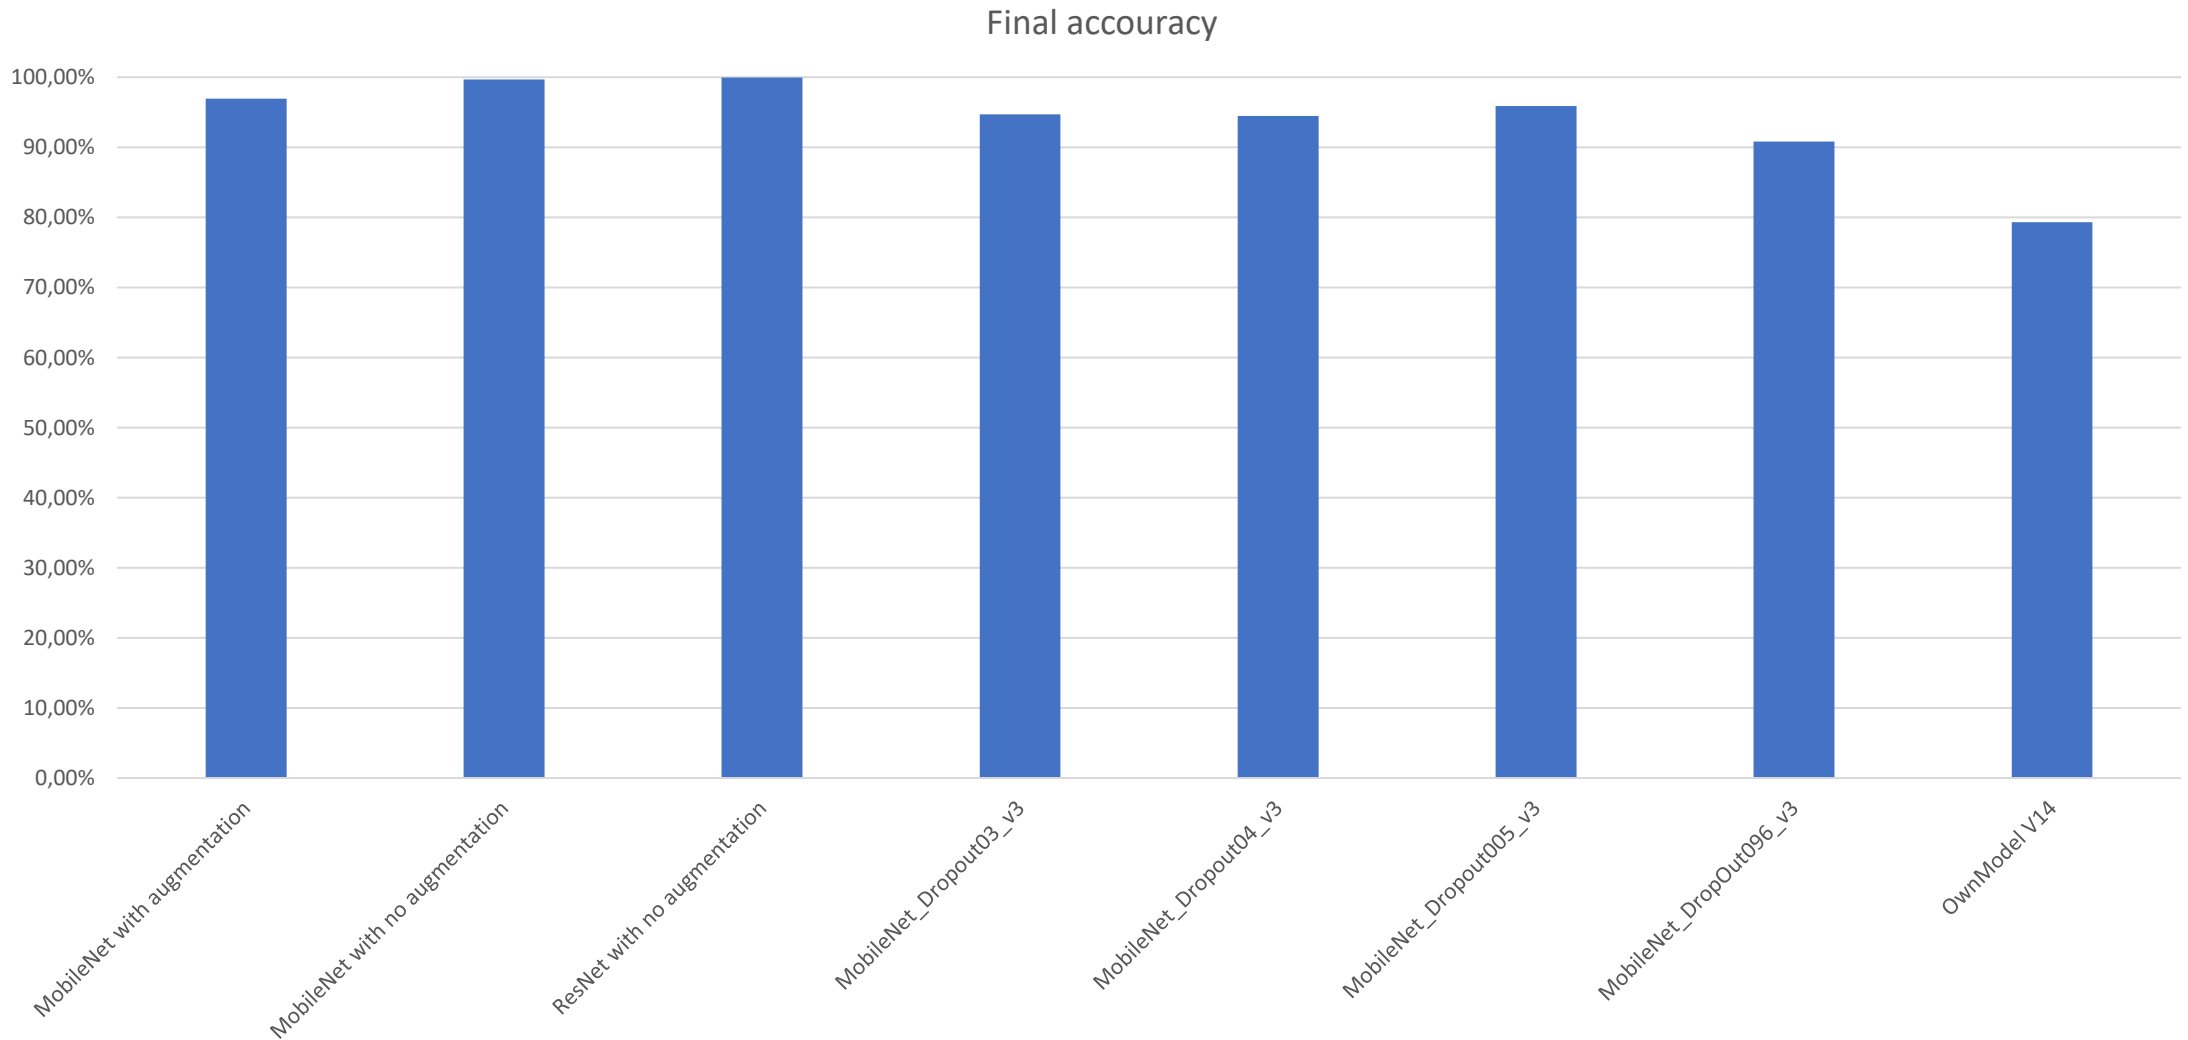

400 images

# Learning of pretrained models

- MobileNet
- ResNet

# Accuracy of pretrained models

# Own model versions

**V1**

**1,633,226 params**

Accouracy/Epoch

$$\text{Accuracy} = f(t)$$

# Carbon footprint

- Total learning time: 10348 minutes => 172 hours
- PC power: 180 W
- Electricity used: 31 kWh
- Energy equivalent of a ton of coal: ~440 kWh

We used around 14 kg of coal
